

# Bipolaris

## Effects on Human Health:

- Skin Infections
- Nose Infections
- General Body Infections

## Symptoms Include:

- Sneezing
- Coughing
- Rash
- General Weakness

## Method of Transmission:

- Airborne
- Contact

## Clinical Information

- If Bipolaris gets into the bloodstream it can lead to endocarditis.
- Respiratory infections are a potential source of entry into the bloodstream.
- Peritonitis is a huge potential problem from this mold.
- The most common reaction to Bipolaris is skin infections. It affects the skin through open wounds. The mold spores attack the wound, making it impossible to cure with antibiotics.
- Bipolaris is also linked to severe immune disorders. The toxins that are released from this mold put continual stress on the immune system making it difficult to fight off illness.
- It has been linked with meningitis.
